Share this PDF with your design agent. Keep page IDs. Return a redesigned PDF with the same pages.

HYBRID ATHLETE

8-week hybrid training app. Auth via Firebase. Workouts + progressive overload stored on-device (localStorage). Nutrition removed.

Instructions for design agent

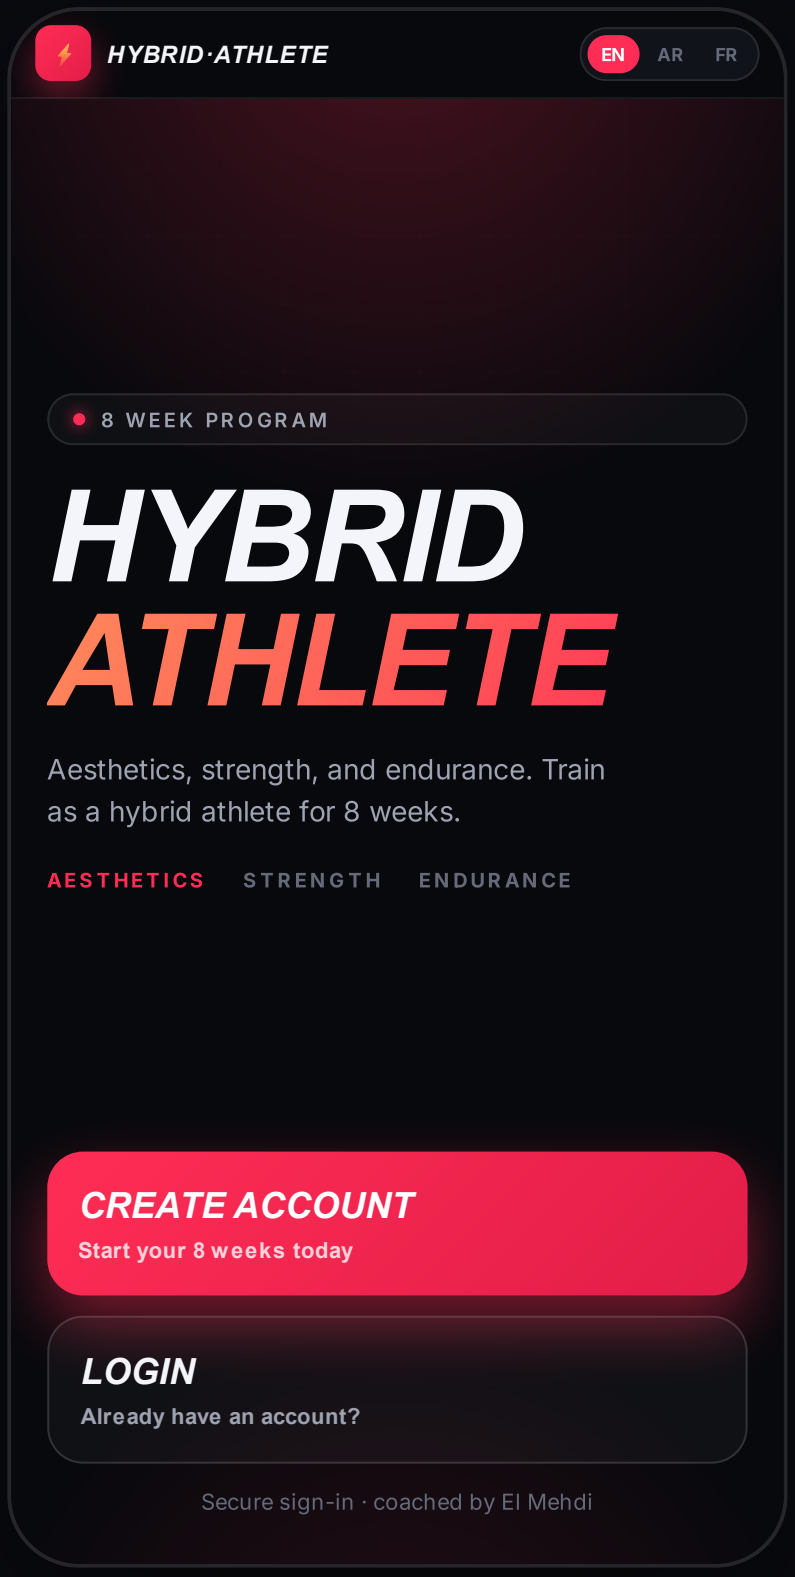

1. Keep the same pages and page IDs (P01–P06).
2. Redesign visuals only — do not invent new product flows unless labeled optional.
3. Preserve: signup/login, home CTA → train, week selector, workout day logging (sets/reps/kg), bottom nav Home/Train.
4. Mobile-first (~390×780). Dark athletic brand with red accent is current; you may change the visual system.
5. Return a PDF with the same page order and IDs so engineering can implement 1:1.

1. **P01** — Auth entry (create account / login)
2. **P02** — Login form
3. **P03** — Home (ready to train)
4. **P04** — Train feed (weeks + days)
5. **P05** — Workout day (exercise logging)
6. **P06** — Week unlocked celebration

P01 · AUTH ENTRY

CREATE ACCOUNT / LOGIN

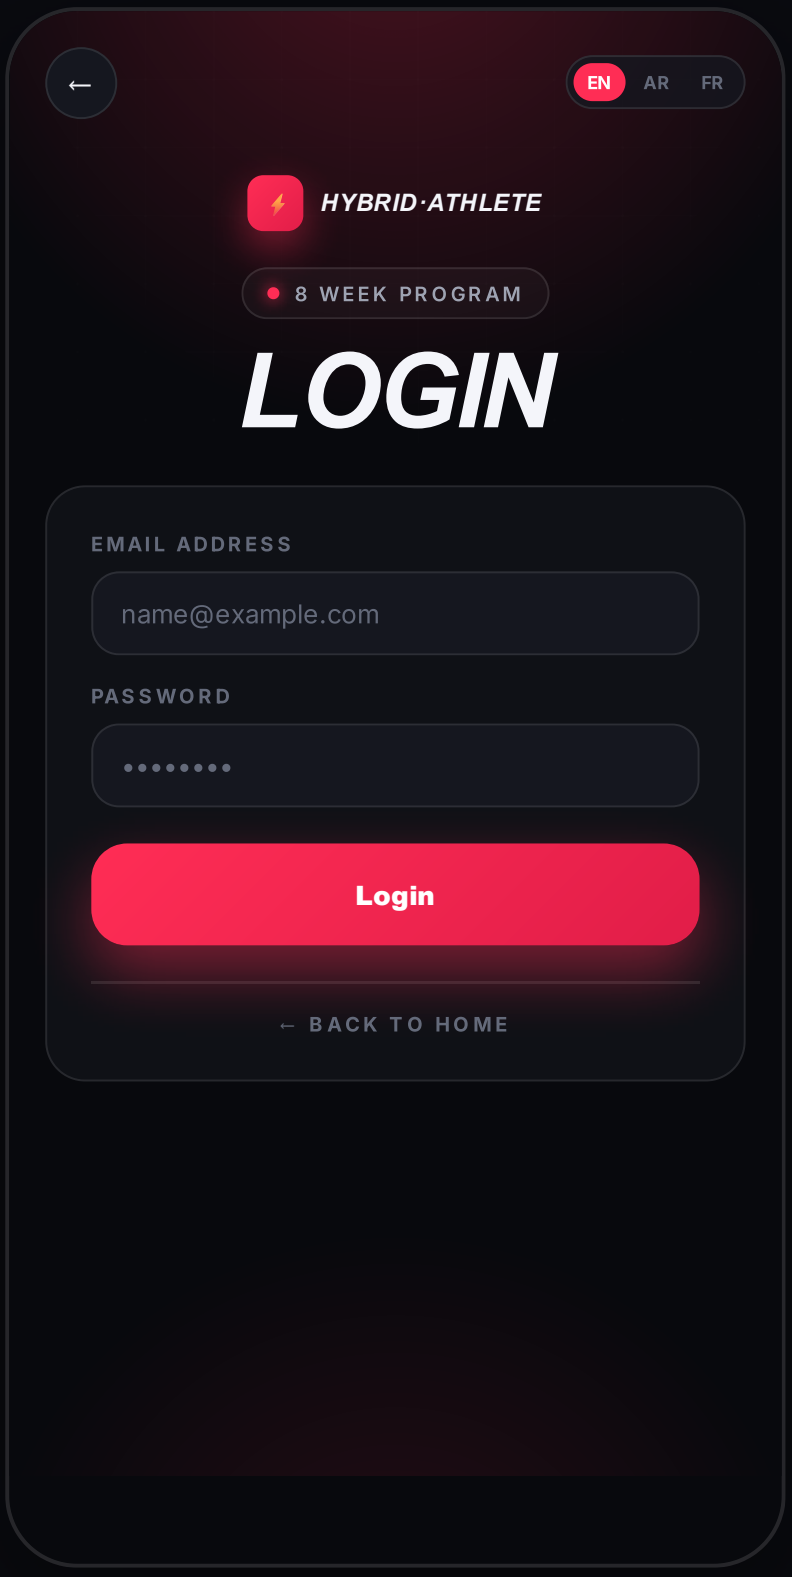

First screen when logged out. Brand hero + two CTAs.

P02 · LOGIN

EMAIL + PASSWORD

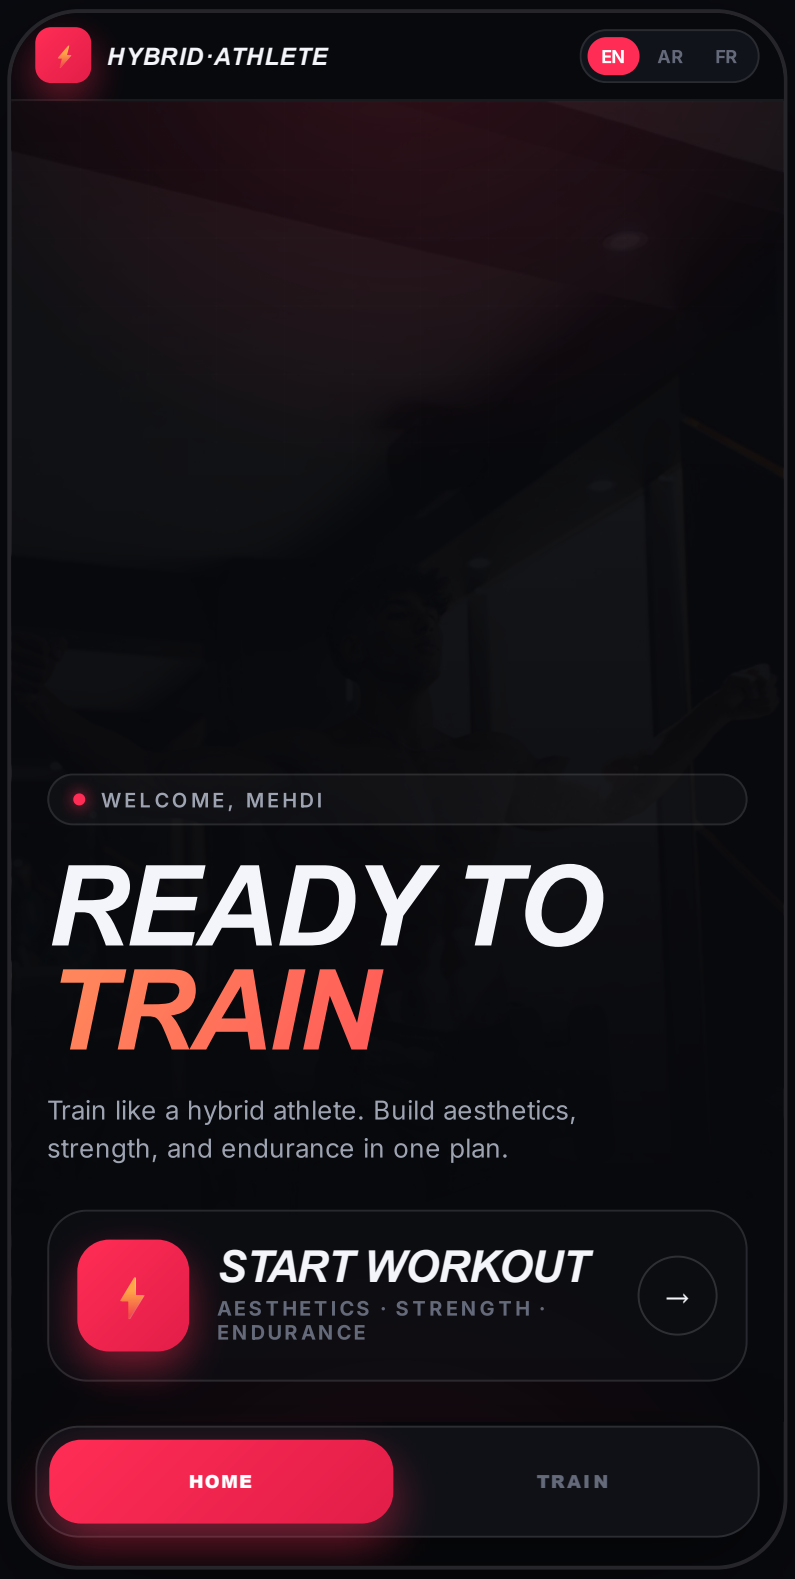

Returning users. Content starts at top (not vertically centered).

P03 · HOME

READY TO TRAIN

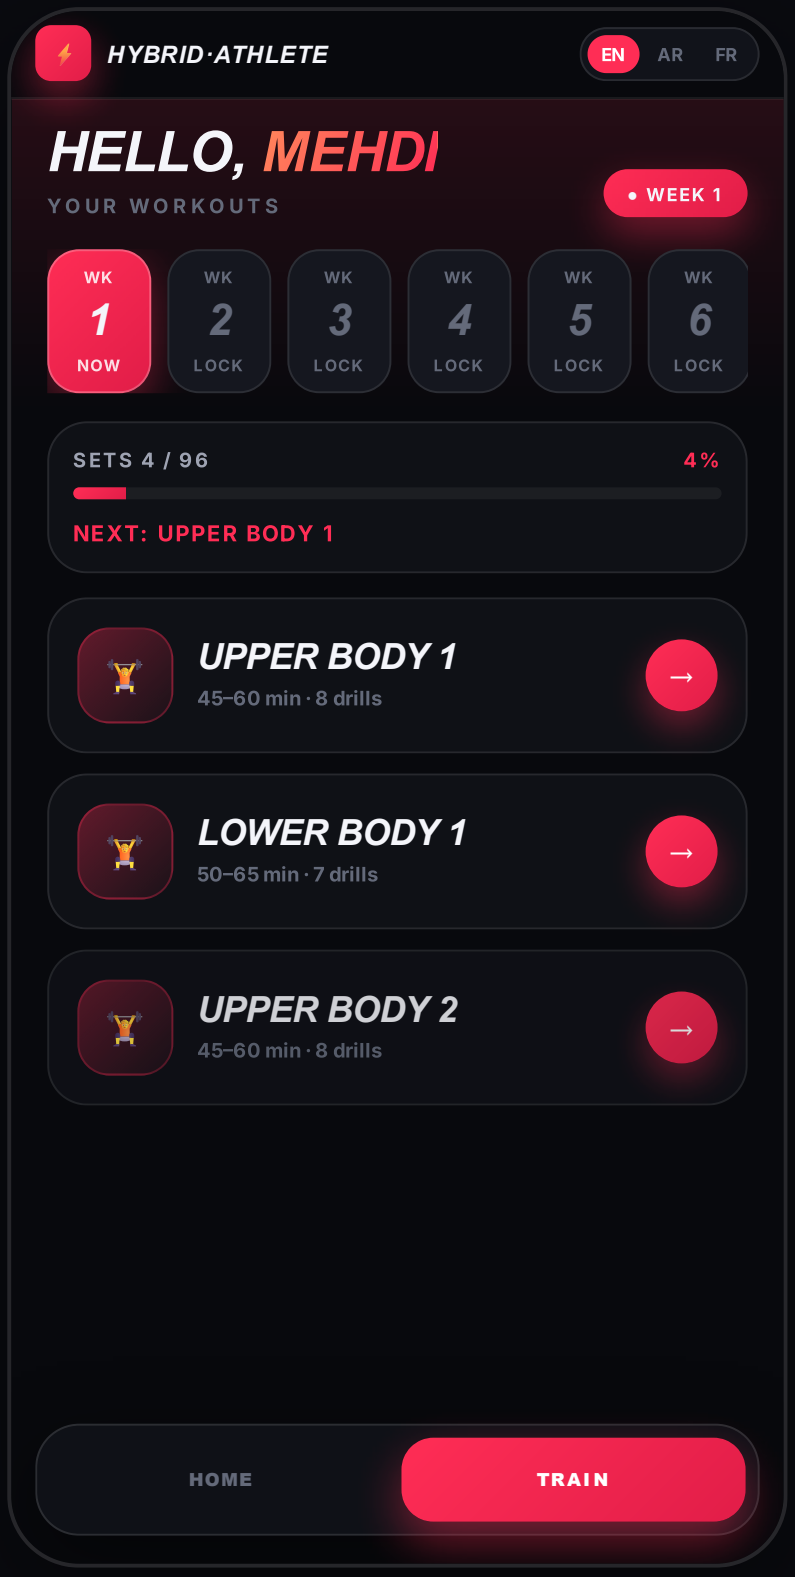

Logged-in home. One primary CTA into Train.

P04 · TRAIN FEED

WEEK SELECTOR + WORKOUT DAYS

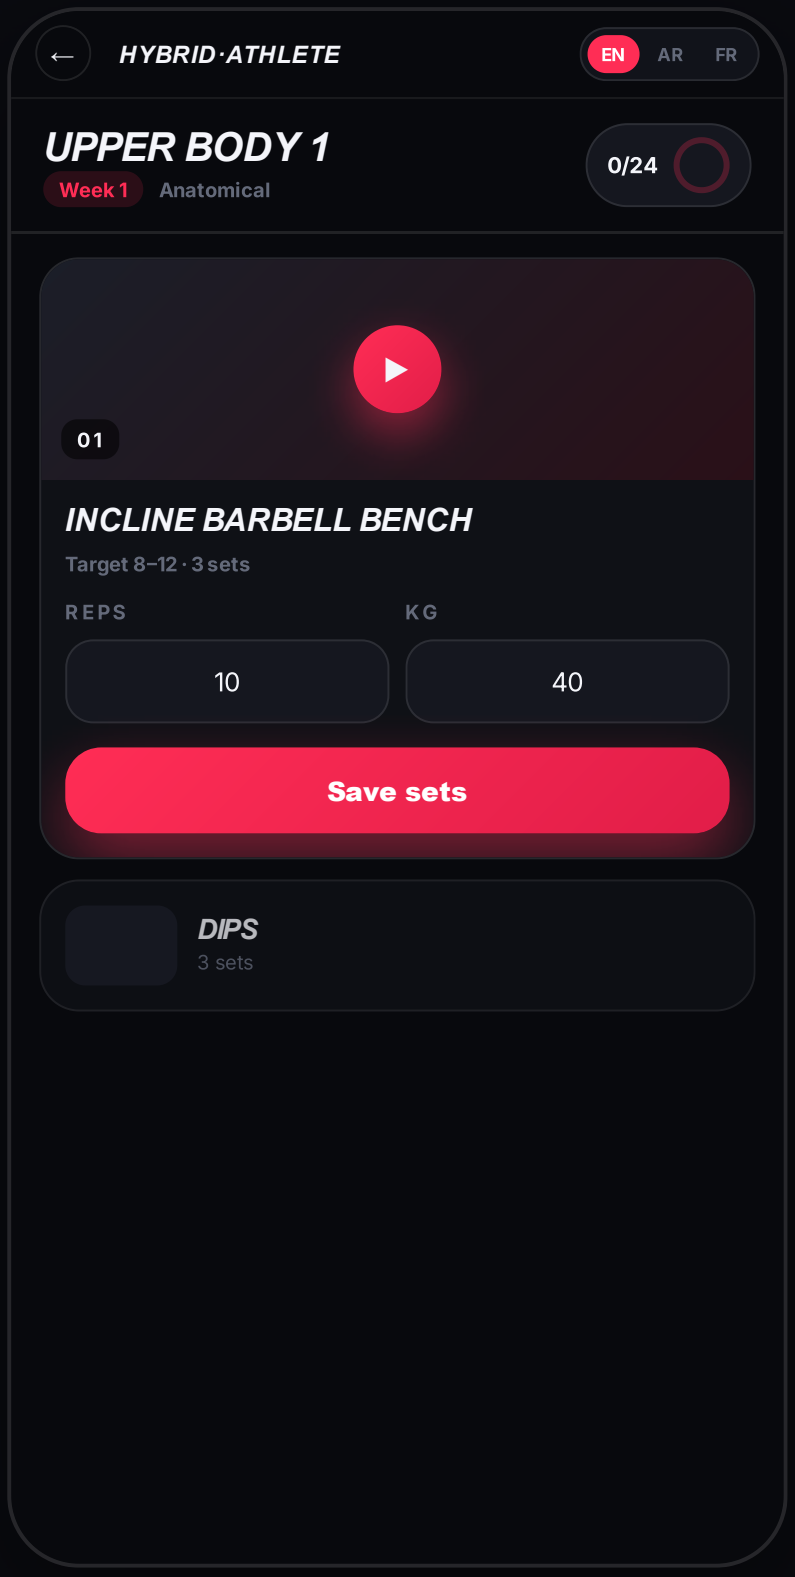

Main training hub. Pick week, open a day.

P05 · WORKOUT DAY

LOG SETS / REPS / KG

Per-exercise logging. Progressive overload uses these values locally.

P06 · WEEK UNLOCKED

CELEBRATION AFTER COMPLETING A WEEK

Modal overlay when all days of a week are logged.
